

Euroshop

The Euroshop exhibition was recently held between 16-20 February in Dusseldorf, Germany. The exhibition brought together all aspects of the retail trade with 3 large exhibition halls of retail refrigeration equipment. All the large European retail display cabinet manufacturers were there exhibiting their latest developments. RD&T's Judith Evans attended the exhibition to look at these developments and to meet with manufacturers. Although a lot of the exhibition contained

'conventional' cabinets there were a few new exciting developments. Top of the list was the magnetic refrigerated deli cabinet on the Arneg stand. The cabinet developed in collaboration with Cooltech showed that magnetic refrigeration for small integral cabinets is beginning to be a commercial possibility. Other areas of interest were a cabinet for disabled wheelchair users (also on the Arneg stand), some cabinets with interesting air flow arrangements and lots of stands with doors for cabinets. These ranged from new Perspex doors to doors that have a dual sliding and hinged function and doors that can be removed for high trading periods.
